

A quick-reference guide to the equipment Reigneth Company Limited supplies, installs, and maintains for banks and businesses across Ghana. Covers our full current product lineup. For pricing, availability, or a site visit, get in touch — contact details are on every page.

Shrink Wrap Machines

High-quality shrink wrap machines designed to protect products efficiently. Installation, repairs, and routine maintenance included.

Ladypack

Compact, angular packaging machine with a 90° heating oven, for PVC, Polypropylene, Polyolefin, or Polyethylene film. Impulse sealing system with a nickel-chrome blade cuts and seals centre-folded roll film; a motorized conveyor feeds items into a shrink tunnel heated by armored heaters. Supplied in six sizes/configurations:

Ladypack 45N/A2 — Flagship model

- Our flagship shrink wrap machine — combined N/A2 configuration of the 45 footprint
- Touch-screen PLC control panel with guided cycle settings
- Impulse-seal-and-tunnel design, foot-pedal operation, integrated film-roll holder

Ladypack 45

- Smallest footprint in the range — lower-volume, bench-side packing runs
- Two conveyor-belt cycles: forward-forward or forward-reverse, selectable from the panel

Ladypack 65

- Our most-supplied configuration — wider sealing table, taller package clearance than the 45
- Electronic control with programmable tunnel temperature, belt speed and sealing time

Ladypack 110

- Largest of the range — wider arch and higher throughput for high-volume floors
- Suited to cash centres and bulk packaging runs

Ladypack Klok 550

- Larger-format model for bigger or bulkier items, same impulse-seal-and-tunnel technology

Ladypack Table Top

- Compact bench/table-top configuration for lower-volume or space-constrained setups

Adpak / Smipack SL Series

Smipack's entry-level L-sealing hood packer, for lower output while keeping most features of the higher output S series.

Smipack SL45

- Entry-level SL series — outputs of up to 300 packs/hour
- Compact single-column hood packer, suited to lighter-duty use

Smipack S560N

- Part of the S series — Smipack's core industrial range, considerably higher throughput
- Powered take-away conveyor for continuous, hands-off production

Smipack S560NA

- Same S-series performance as the S560N, alternative chassis finish

Shrink Wrap Films

Packaging films made from PVC, Polyolefin, or Polyethylene, providing a tight, secure seal that resists tampering and transit damage. Available in various thicknesses and sizes to match your product requirements.

Bank Note Banding Machines

Advanced banding machines for secure, efficient currency handling and streamlined cash management, supplied to banks across Ghana.

Akebono OB Series

Arch-style tabletop machine applying paper or film bands around small bundled items — banknotes, brochures, envelopes and similar flat items — using a heat-sealing system. Three arch sizes on the same reliable mechanism:

**Akebono OB-360**

- Up to 30 banding cycles per minute
- Bands packages from 30mm × 10mm up to 420mm × 210mm
- Works with paper or film tape, no parts change needed
- New track design supports 60-micron film, reducing cost and waste

Akebono OB-460

- Same heat-sealing mechanism, stepped up to a larger arch
- Suited to bundles and printed-material runs exceeding the OB-360's capacity
- Photo available on request — newly added to our lineup

Akebono OB-560

- The largest arch in the range, for higher-volume banding floors
- Optional large dispenser available

Mabas SBM-90 Banding Machine

Heavy-duty automatic banknote banding machine from Mabas Electronics, with an integrated ink-jet band printer.

- Prints bank name, branch name, operator name and date across 4 lines
- 3 lines are operator configurable (20 characters each)
- Date/time line is system generated and cannot be edited
- Easy, quick, reliable and productive in daily use

Alternative / Budget-Line Banding Machines

For customers who don't need the genuine Mabas SBM-90's integrated band printer, we also supply the DFM5540 and FM5540 — a separate, Chinese-manufactured line at a lower price point.

DFM5540

- Similar form factor and banding function to the genuine Mabas SBM-90, lower price point

FM5540

- A step up from the DFM5540 within the same alternative line

Note: the DFM5540 and FM5540 are independently manufactured and are not Mabas products. Parts, firmware, and service procedures are not interchangeable with the genuine Mabas SBM-90 — let our technicians know which model you have when ordering spares.

Banding Bands & Tape

Pre-printed and blank paper bands and film tape for banknote banding machines, sized to match your bank's branding and denomination requirements.

Coin Counting Machines

Fast, accurate single-denomination coin counters built for continuous, high-volume processing.

Coin 100 / 120

- Portable, cost-effective solution for single-denomination processing
- Processes large quantities of pre-sorted denominations swiftly and accurately
- Simple double-dial setup for direct thickness and diameter adjustment
- Continuous counting — can be fed while in operation
- Ideal for gaming, vending, or banking use

Why Choose Reigneth?

- Quality products — sourced from reputable manufacturers for durability and reliability
- Expert maintenance — skilled technicians keep equipment in optimal condition
- Customer-centric approach — tailored solutions and prompt support to minimize downtime
- Nationwide coverage — Southern and Northern Zone technician teams serve clients across Ghana
